TOGETHER, WE DESIGN FOR GOOD

At Safehinge Primera, our purpose is clear:

**Together, we design for good.
We help to protect people through vulnerable times.**

We believe in the greater good; if it doesn't do good, we don't design it. Working together as a team, and with input from Clinicians, Estates Teams, Experts by Experience, and Architects, we help to facilitate recovery in mental health inpatient environments.

By developing products that maintain physical safety, uphold privacy and dignity, and promote independence and autonomy, we don't simply provide a 'quick fix'. We support people on their journey.

Our Electronic Lockset, bridges the gap between patient independence and safety. Aligned with the Care Quality Commission's 'Regulation 10: for dignity and respect', it grants patients control over their space while providing staff with secure oversight. It promises a future where Mental Health bedrooms are safe, empowering, and truly transformative.

INTRODUCING SAFEHINGE PRIMERA'S ELECTRONIC LOCKSET

A SOLUTION DESIGNED SPECIFICALLY FOR MENTAL HEALTH BEDROOMS

Through feedback and discussions with Estate Managers, Clinicians, and Architects, the need for an integrated electronic access locking solution became clear. A system that not only saves valuable staff time but also prioritises safety and empowers patients.

We understand that a significant amount of clinical time is spent locking and unlocking patients' bedroom doors. Recognising the potential for this time to be better spent on delivering person-centered care and acknowledging the sensitivity around patients having to request access to their rooms, we paid close attention to this feedback.

In response, our engineers stepped up to the challenge and developed the Electronic Lockset – a unified, time-saving solution that empowers a more patient-centric approach, and seamlessly integrates with your preferred access control system, including Paxton.

Meeting the unique needs of Mental Health bedrooms.

Unlocking Independence: Our Locks, Your System, No Compromise.

TIME-**SAVING** EFFICIENCY: EASY INSTALLATION AND THE POWER OF ONE SYSTEM

In the heart of every Mental Health facility, safety isn't just a necessity; it's a fundamental right. Safehinge Primera's Electronic Lockset redefines the standards by seamlessly integrating with reliable third-party access control systems, including **Paxton - used by most NHS Trusts**.

1. EFFORTLESS INSTALLATION:

Experience the ease of installation like never before. Our lockset is easily installed, wireless, retrofit-friendly, and requires no tedious cable chasing. Your mental health facility can now be upgraded without disrupting your operations. This unified system not only simplifies operations but also optimises staff efficiency, allowing staff to focus instead on providing exceptional care.

2. ELIMINATE DOWNTIME:

Say goodbye to downtime during installation. Our lockset's compatibility ensures a smooth transition. The power of one system means your facility can upgrade seamlessly, eliminating interruptions and maintaining the continuity of care.

3. SMART PLATFORM FOR ELECTRONIC LOCKSETS

Operated via a wireless network, the Electronic Lockset is connected to and managed by your chosen access control system in a similar way to a hardwired wall reader. However, this system uses a Hub as a wireless interface to the lock, eliminating the need for wiring to the door.

4. REAL-TIME UPDATES

Updates are instantly applied, providing superior security and allowing staff to respond to changing service user permissions.

5. CHOICE OF CREDENTIALS

The Electronic Lockset is compatible with the following Mifare Credentials:

- Ultralight
- Classic 4K
- Classic 1K
- DESFire EV1 & EV2

Safehinge Primera can provide the following Classic 1K credentials:

Smart Card

Part No.: PR-6904-UCP

Technology: Mifare Classic 1K

Adjustable Wristband

Part No.: PR-6934-AWB

Technology: Mifare Classic 1K

The adjustable wristband has a 4.8kg break force and is recommended for service users.

Tear Fob

Part No.: PR-6914-EGF

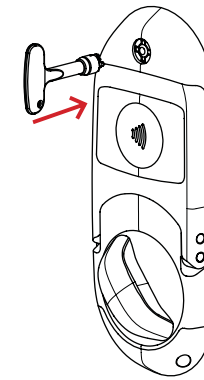

Technology: Mifare Classic 1K

TAKE A LOOK AT OUR PARTNERSHIP WITH PAXTON

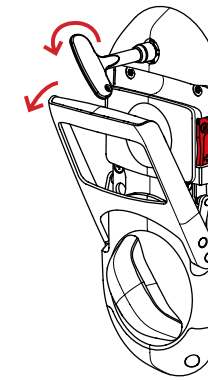

UNCOMPROMISED SAFETY: INTUITIVE OVERRIDE FOR GUARANTEED ACCESS IN 2 SECONDS, ALWAYS

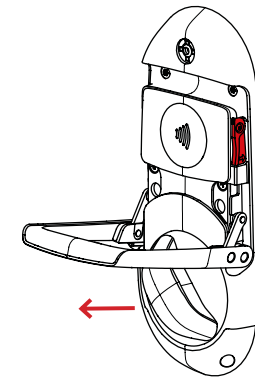

OPERATION OF THE INTEGRATED OVERRIDE SYSTEM

- 1 Activate the emergency lever using the staff-only Lifeline key

- 2 Once activated, the emergency lever will automatically eject. You then push down on the lever to the horizontal position to unlock the door

- 3 Use the emergency lever to pull the door open

In critical situations, time is of the essence. Safehinge Primera's lockset features an intuitive override system that provides access **within two seconds**, even in the most determined barricade situations or power outages. That's why we've developed this Electronic Lockset with the mechanical override integrated into the lockset to ensure it's ready for quick, reliable access. This rapid response mechanism ensures the safety of both staff and service users, instilling confidence and trust in the system's capabilities.

EMPOWERING PATIENTS: INDEPENDENT, EFFICIENT ROOM ACCESS, WITHOUT TRADITIONAL KEY HASSLES

At SafeHinge Primera, we believe in redefining Mental Health spaces. Our lockset isn't just a device; it's a catalyst for change. Imagine a world where patients have the power to control their surroundings, where independence is not just a notion but a tangible reality.

UNLOCK INDEPENDENCE: SAFEHINGE PRIMERA'S INNOVATIVE LOCKSET

Anti-Ligature Wristband:

Granting patients the freedom to lock and unlock their rooms independently.

Enhanced Autonomy:

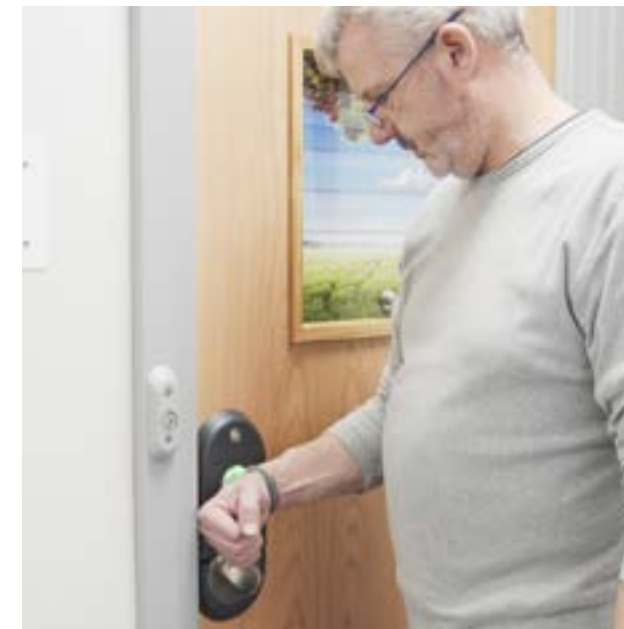

Fosters a sense of control, empowering service-users in their environment.

Reduced Confinement:

Minimises feelings of confinement, promoting a sense of freedom and well-being.

Nurturing Environment:

Contributes to good mental healthcare, allowing individuals to focus on their recovery journey without unnecessary restrictions.

UNLOCKING NURSING TIME WITH LESS DOOR DUTY

The unique anti-ligature access wristband translates into tangible benefits for clinicians and other healthcare staff. With patients now capable of managing their room independently, nurses are freed from the continuous task of locking and unlocking doors. Instead of managing door access, they can focus on what they do best – providing therapy and essential care.

Yet, nurses retain the ability to always gain access into the room, especially in emergencies. This shift in responsibilities helps to break down power dynamics, and fosters a more efficient and nurturing environment for both patients and staff.

GET IN TOUCH

However you choose to get in touch, we're happy to help. Our customer service and specification teams can help with any queries about our products. Because they're experienced in Mental Health environments, our team welcomes the chance to discuss any challenges you might be facing, so we can set to work solving them and stay within your budget.

Our specification team covers the whole of the UK and are pleased to drop by and introduce you to Safehinge Primera, explain our Electronic Lockset in detail, demonstrate mobile samples and listen to your requirements.

We look forward to hearing from you.
